Product Description

ST52 Honed Pipe D35 Mm Hydraulic Cylinder Honed Tube Cold Drawn Honed Tubing Seamless Carbon Steel Pipe

The production process of general seamless steel pipes can be divided into two types: cold drawing and hot rolling. The production process of cold-rolled seamless steel pipes is generally more complicated than hot rolling. The tube blanks must first be subjected to three-roll continuous rolling, and then extruded. After the sizing test, if there is no response crack on the surface, the round pipe will be cut by a cutting machine and cut into a blank of about one meter in length.
